

VACUUM LIFTER COMPETENCY ASSESSMENT

WORKER BEING EVALUATED:				
EVALUATOR				
EVALUATOR:				
LOCATION: DATE:				
This evaluation form can be used as a demonstration or knowledge-based competency of a work Vacuum Lifter. It can be used by either Workers or Employers to assess their knowledge.	(er's underst	tanding of a		
The ASME B30.20 Standard has been used for reference when compiling this evaluation. ASME Vacuum Lifter Manufacturer specifications must also be referenced to provide specific information re Inspection, Limitations and Use.				
EMPLOYER READ THE CAPITALIZED WORDS, can the Employer successfully explain and complete the following.	YES	NO		
1) COMPLIANCE TO STANDARDS THE EMPLOYER TO VERIFY THE VACUUM LIFTER IS COMPLIANT TO A STANDARD. Compliance to a standard should be confirmed in the manufacturers' specifications, generally the ASME B30.20 standard in North America.				
2) <u>DESIGN FACTORS</u> DOES THE EMPLOYER KNOW THE DESIGN FACTOR ASSOCIATED WITH THE VACUUM LIFTER BEING USED? This is the point it will break above its rated load. The minimum required design factor of vacuum lifter is based on the service class. The manufacturer must be consulted.				
3) MANUFACTURERS SPECIFICATIONS THE EMPLOYER MUST HAVE THE MANUFACTURERS SPECIFICATIONS READILY AVAILABLE. The only way a worker can be assessed is if they have been given the manufactures specification for the product being evaluated on, as manufactures specifications differ. This information will provide the worker its limitations, use and inspection requirements.				
4) PERIODIC INSPECTIONS THE EMPLOYER IS RESPONSIBLE TO ENSURE THAT THE VACUUM LIFTER HAS HAD A PERIODIC INSPECTION. These are the inspections required by the ASME B30.20 standard that the employer must ensure are completed. At a minimum annually.				
5) STORAGE THE EMPLOYER IS RESPONSIBLE TO ENSURE PROPER VACUUM LIFTER STORAGE WHEN NOT IN USE. Storage is important to stop or reduce possible damage to the vacuum lifter whether it be mechanical, chemical or temperature related. What is your company's storage policy?				

VΔ	CUUM LIFTER KNOWLEDGE		
	aluator to READ THE CAPITALIZED WORDS and see if the worker can successfully	COMPETENT	NEEDS
	plain the following.	COM LILIT	COACHING
CV	Main the following.		
6)	MANUFACTURERS SPECIFICATIONS DOES THE WORKER HAVE ACCESS TO		
	THE MANUFACTURERS SPECIFICATIONS? The worker knows that manufacturers		
	specification are available, where they are located, and why they have to be used.		
7)	<u>DESIGN FACTORS</u> DOES THE WORKER KNOW THE DESIGN FACTOR		
	ASSOCIATED WITH THE VACUUM LIFTER BEING USED? The worker states the		
	minimum required design factor of vacuum lifters is based on the service class. The		
	manufacturer must be consulted.		
8)	PERIODIC INSPECTIONS CAN THE WORKER VERIFY THAT THE VACUUM		
	LIFTER HAS HAD A PERIODIC INSPECTION? These are the annual inspections		
	required by the employer to complete. As stated in the ASME B30.20 standard.		
	Records should be available for each periodic inspection and when the vacuum lifters		
	is either altered or repaired.		
9)	MARKINGS - MANUFACTURER SHOW ME THE MANUFACTURERS NAME		
	MARKING ON THE VACUUM LIFTER. The manufacturer's name and contact		
	information must be marked on the vacuum lifters. This may be an actual name, but		
	in some cases is a trademark or abbreviation, the contact information may be an		
	address, telephone number or website.		
10)	MARKINGS – SERIAL NUMBER SHOW ME THE SERIAL NUMBER MARKING ON		
	THE VACUUM LIFTER. The serial number must be marked on the vacuum lifter. It		
	gives vacuum lifters its own unique unit identifier.		
11)	MARKINGS - LIFTER WEIGHT SHOW ME THE VACUUM LIFTER WEIGHT		
	MARKING ON THE VACUUM LIFTER. The vacuum lifters own weight must be		
	marked on the vacuum lifter. The vacuum lifters weight must be taken into		
40)	consideration when calculating total load weights.		
12)	MARKINGS - POWER REQUIREMENTS) SHOW ME THE VACUUM LIFTER		
	ELECTRICAL POWER REQUIREMENTS MARKING ON THE VACUUM LIFTER.		
	The voltage of the primary power supply or battery must be marked on the vacuum		
	lifter. Normally a voltmeter showing maximum and minimum battery voltage in Volts		
421	DC.		
13)	MARKINGS - PRESSURE AND VOLUME) SHOW ME THE VACUUM LIFTER PRESSURE AND VOLUME OF COMPRESSED AIR REQUIRED MARKING ON		
	THE VACUUM LIFTER. The suction pressure of the suction cups must be marked		
	on the vacuum lifter. Normally a pressure gauge showing minimum allowable lifting		
	pressure in Bar or PSI.		
14	MARKINGS - RATE LOAD SHOW ME THE RATED LOAD MARKING ON THE		
ידי	VACUUM LIFTER. The rated load must be marked on the vacuum lifter. Usually		
	marked with WLL "working load limit" followed by a number and unit that can be US		
	or Metric E.g. 1 Ton, 2000 lbs. or maybe 1Tonne, 1000 kg.		
15)	MARKINGS - DESIGN CATEGORY SHOW ME THE DESIGN CATEGORY		
.5)	MARKING ON THE VACUUM LIFTER. The design category must be marked on the		
	vacuum lifter. Design Category refers to the vacuum lifter's static strength criteria.		
16)	MARKINGS – SERVICE CLASS SHOW ME THE SERVICE CLASS MARKING ON		
	THE VACUUM LIFTER. The service class must be marked on the vacuum lifter.		
	Service Class refers to the vacuum lifter fatigue life criteria.		
Ь	The state of the s	1	

17) MARKINGS – PRODUCT SAFETY LABEL SHOW ME THE PRODUCT SAFETY LABEL ON THE VACUUM LIFTER. The vacuum lifter must have fixed to it a product safety label concerning the operating procedures, cautionary language identifying hazards, and methods for accident prevention. The worker must refer to instruction	
manuals for additional information.	
18) <u>TEMPERATURES</u> WHAT IS THE TEMPERATURE RANGE OF THE VACUUM LIFTER FROM THE MANUFACTURER? AND HOW CAN THE WORKER VERIFY THIS. The worker knows temperatures exceeding normal ambient temperatures can affect the vacuum lifter. The worker must confirm with the manufacturer as they may differ.	

VACUUM LIFTER APPLICATION		NEEDS
Evaluator to READ THE CAPITALIZED WORDS and see if the worker can successfully	COMPETENT	COACHING
explain the following.		COACHING
19. <u>REMOVAL CRITERIA</u> HAVE THE WORKER TELL YOU REASONS TO REMOVE		
THE VACUUM LIFTER FROM SERVICE. 1. Structural members if deformed,		
cracked or worn, 2. Vacuum generator output, 3. Vacuum pad seals for cuts, tears,		
excessive wear, or foreign particles, 4. Vacuum lines and connections for leaks, cuts,		
kinks, and collapsed hoses, 5. Vacuum reservoir for leaks and visual damage, 6.		
Indicator lights, gages, horns, bells, pointers or other warning device, and vacuum		
level indicators, 7. Missing or illegible operating control markings. Manufacturer may		
give specific criteria and must be referenced.		
20. <u>LOAD DISTRIBUTION</u> IF A LOAD IS ATTACHED TO A VACUUM LIFTER HAVE		
THE WORKER TELL YOU HOW THE LOAD MUST BE DISTRIBUTED? The worker		
knows that the vacuum lifter must be attached securely above the loads center of		
gravity to achieve balance.		
21. <u>LOAD SECURITY</u> IF THE VACUUM LIFTER IS BEING USED TO LIFT A LOAD		
HAVE THE WORKER TELL YOU WHAT COULD AFFECT LOAD SECURITY. The		
worker knows that load thickness, balance, surface cleanliness, flatness, bending,		
temperature, and wind speed can affect the vacuum lifter load securement		
capabilities. The worker must also verify that the load is well secured and properly		
balanced when it is initially lifted. Manufacturer will give specific criteria and must be		
referenced.		
19) <u>SIDE LOADING</u> IF THE VACUUM LIFTER IS BEING USED TO SIDE PULL OR		
SLIDE A LOAD HAVE THE WORKER TELL YOU HOW THIS AFFECTS THE		
VACUUM LIFTER. The worker knows that the vacuum lifter shall not be used for side		
pulls or sliding the load unless specifically authorized. Manufacturers may give		
specific criteria and must be referenced.		
20) <u>Surface condition</u> if the vacuum lifter is being used to lift a		
LOAD HAVE THE WORKER TELL YOU HOW SURFACE CONDITION COULD		
AFFECT THE VACUUM LIFTER. The worker knows that any oil, grease, dust, dirt,		
ice or excess water should be removed from the loads surface where the suction cups		
will be located. Manufacturer will give specific criteria and must be referenced.		
21) STORAGE HAVE THE WORKER TELL YOU WHERE THE LIFTING MAGNET IS		
KEPT WHEN NOT IN USE. The worker must land any attached load and store the		
lifting magnet before leaving the device. Storage is important to stop or reduce		
possible damage to the lifting magnet whether it be mechanical, corrosive or		
temperature related. Manufacturer may give specific criteria and must be referenced.
